

ABSTRACT OF THE DISCLOSURE

A toner composition including toner particles; and an external additive located on the surface of the toner particles and including Si, wherein the toner composition satisfies the 5 following relationship, $(PSi2p(1\text{ min}) - PSi2p(30\text{ min})) \leq 0.8$ eV, wherein PSi2p (1 min) and PSi2p (30 min) represent positions of the Si2p peaks of the Si element of the toner composition when the toner composition is subjected to an X-ray photoelectron spectroscopy analysis after the toner 10 composition is mixed with a carrier for 1 minute or 30 minutes using a TURBULA mixer at a revolution of 20 rpm, respectively.
